

CAUTION :
SULPHUR VAPORIZATION CAN DAMAGE
YOUR CONTROLLER!

In order to protect and ensure a long life to your CO2 controller, it is very important TO DISCONNECT AND COVER THE CONTROLLER (placing a plastic bag around the unit) WHILE USING SULPHUR VAPORIZERS IN YOUR GROW ROOM. Grozone is able to detect CO2 sniffers that have been contaminated by sulphur and we reserve the right not to repair these defect units under warranty. However, we are able to repair your unit at a reasonable cost in a timely manner.
